

■ CTRL+ALT+WIN — Supplementary File

Project Title: Voyager.AI — Your Intelligent Travel Companion

■ Team Details:

Team Name: CTRL+ALT+WIN

Project Category: AI + TravelTech

Members:

- Saket Sanjesh Jain (23BCE0370, VIT Vellore)

Contact: saketsanjesh.jain@vitstudent.ac.in

■ Problem Statement

Travelers often struggle to plan, adapt, and relive trips. Existing apps focus either on bookings or static itineraries, lacking personalization, adaptability, and post-trip intelligence.

■ Solution — Voyager.AI

- Voyager.AI is an AI-powered travel ecosystem that:
1. Plans your journey dynamically using Gemini AI.
 2. Adapts in real-time through Live Adventure Mode.
 3. Builds dreams collaboratively with Dream Destinations and savings tracking.
 4. Handles real-world logistics via Bookings Required (flights/trains).
 5. Creates memories with Memory Weaver (AI-crafted travelogues).

■ Architecture Overview

Frontend: React (Vite + Tailwind + Framer Motion)

Backend: Express.js + Firebase + Gemini AI

Database: Firebase Firestore

Hosting: Firebase Functions + Firebase Hosting

■ Tech Stack

Layer	Tools Used
Frontend	React, Tailwind, Framer Motion
Backend	Express.js, Firebase Functions
AI	Google Gemini API
Database	Firestore
Hosting	Firebase Hosting
Integration	Browser Geolocation, Booking APIs (mocked)

■ Future Roadmap

- ■ Group collaboration (shared itineraries & savings goals)
- ■ Smart route optimization with crowd & weather data
- ■ Social feed for travelers (“Voyager Stories”)
- ■ Tour marketplace integration

■ Hackathon Status

Phase 1: Core platform & onboarding ■

Phase 2: Dream Destinations + Live Adventure + Bookings Required ■

Phase 2.5: Memory Weaver (in progress)

Phase 3: Social/Collaborative systems (next)

■ Demo / Walkthrough

- Frontend Demo: [Firebase Hosting Link]
- Repository: [GitHub Link]
- Demo Video: [YouTube or Drive Link]

■ Appendix

- Screenshots of each feature
- AI Prompt examples (Gemini / Copilot)
- Design diagrams or inspirations
